

Penny: Shall we play golf today?

Sheldon: Well, we need to check if it will rain first, then to see if it will be windy, in fact let's build a support vector machine to forecast whether we should play golf or not..., wait...I am doing it in my head now, going to a high dimensional space and visualizing a hyperplane to see if I can come up with the optimal decision boundary... oh oh yeah ... I see my support vectors now. The F1-score is about 90%.. OK. Yes, sure we can go now...
